

Marketing 411 Project 1 iFood

We have taken on a new client, iFood, a Brazilian company. Choose one of the two business objectives below. Use the customer data to investigate the objective and recommend actions that iFood could take.

Founded in Brazil in 2011, iFood has grown into a digital marketplace that connects consumers with restaurants, retailers, and delivery couriers. Customers use its website and mobile app to order prepared meals, groceries, pharmacy items, and other convenience products. This model gives local businesses access to customers while iFood provides the technology that supports ordering and delivery. Prosus, a global consumer internet group, acquired the remaining minority stake in November 2022, bringing iFood under its full ownership. [1, 2]

In a 2026 update, Prosus reported that iFood connected 65 million consumers with more than 500,000 restaurant and merchant partners across over 2,000 Brazilian cities, processing more than 180 million orders per month. [3] This broad customer base creates opportunities to tailor marketing to different needs, budgets, and purchasing habits. For this project, understanding which customers respond to offers and which browse without purchasing can help managers decide where to focus campaigns and how to encourage more purchases.

Business objectives

Option 1 Ineffective targeting

iFood wants to create more effective targeted campaigns. Analyze the last campaign using Response (1 = accepted the offer; 0 = did not accept). Which types of customers were most responsive, and which were not?

Connect findings to a decision. Identify which groups iFood should prioritize in a future campaign and explain why. Consider both how responsive a group is and how many customers it includes.

Option 2 Low conversion users

iFood has noticed that some customers visit its website frequently but make few or no website purchases. Identify these customers, describe how they differ from other customers, and suggest ways to encourage purchases.

Connect findings to a decision. Identify potential ways iFood could encourage purchases for the target group of customers. Consider customer profiles and the types and amounts of products being purchased by different customers.

Data

Start from the raw ifood.csv file and use the data dictionary on the next page to interpret the variables. Clean and modify the data as needed for your chosen objective. You may create customer groups, such as income brackets, when useful. Explain your choices and document how you handle missing or unusual values. Include well-commented code so the analysis can be reproduced from the raw file.

Data dictionary

Feature	Description
AcceptedCmp1	1 if costumer accepted the offer in the 1 st campaign, 0 otherwise
AcceptedCmp2	1 if costumer accepted the offer in the 2 nd campaign, 0 otherwise
AcceptedCmp3	1 if costumer accepted the offer in the 3 rd campaign, 0 otherwise
AcceptedCmp4	1 if costumer accepted the offer in the 4 th campaign, 0 otherwise
AcceptedCmp5	1 if costumer accepted the offer in the 5 th campaign, 0 otherwise
Response (target)	1 if costumer accepted the offer in the last campaign, 0 otherwise
Complain	1 if costumer complained in the last 2 years
DtCustomer	date of customer's enrollment with the company
Education	customer's level of education
Marital	customer's marital status
Kidhome	number of small children in customer's household
Teenhome	number of teenagers in customer's household
Income	customer's yearly household income
MntFishProducts	amount spent on fish products in the last 2 years
MntMeatProducts	amount spent on meat products in the last 2 years
MntFruits	amount spent on fruits in the last 2 years
MntSweetProducts	amount spent on sweet products in the last 2 years
MntWines	amount spent on wines in the last 2 years
MntGoldProds	amount spent on <i>gold</i> products in the last 2 years
NumDealsPurchases	number of purchases made with discount
NumCatalogPurchases	number of purchases made using catalogue
NumStorePurchases	number of purchases made directly in stores
NumWebPurchases	number of purchases made through company's web site
NumWebVisitsMonth	number of visits to company's web site in the last month
Recency	number of days since the last purchase

Deliverables

Deliverable 1 Analysis document

Submit a rendered Word document containing all code used for data wrangling, analysis, and initial visualizations. Include the resulting output and fully rendered plots with descriptive titles and labeled axes. This document is intended for technically focused colleagues at your company.

Use clearly labeled sections, well-commented code, and written descriptions to explain what you did, why you did it, and what the results mean. Someone who is unfamiliar with your code or data should be able to read the descriptions in the file and understand what was done. Define important variables and customer groups, explain key data preparation choices, and interpret the results in relation to your chosen business objective.

Deliverable 2 One page executive summary

Submit a well-written, one-page executive summary for an iFood manager. Use short sections with descriptive headings and plain language. The summary should stand on its own and cover the following content:

Business objective. State the problem you investigated, why it matters to iFood, and the business decision your analysis supports.

Approach. Briefly explain at a managerial level what customer data you examined and which comparisons you used to address the problem.

Key findings and implications. Present the most important results, supported by a few specific numbers or comparisons. Explain what those findings mean for the business and any limitations that materially affect the decision.

Recommendation. Recommend a concrete action tied to your findings. Identify the customers or behavior it addresses and, where appropriate, a next step to test the recommendation or resolve uncertainty.

For the executive summary, leave out code and detailed technical procedures, such as step-by-step data cleaning, standardization, or cross validation. Mention a data issue only when it changes how a manager should interpret the findings or act on the recommendation.
